SEPARATE WHITE WAISTS SARTORIAL STANDBYS.

Several kinds of lace contribute to the development of the new separate white blouses. Much Brussels is employed for the plainer sort, although they can scarcely be termed simple, so elaborate is the handwork shown in the ow of pin tucking and shirring employed to ornament them before the lace trimmings are applied. Nearly every such waist boasts a lace yoke or collar of duchess, point de Venise or Irish, and often the sleeves are banded and striped to match. Bretelles and suspenders are wholly of embroidered net or lace, a trimming scheme which greatly simplifies the making of such a blouse, but in no way modifies the expense.
